<b>API update</b>	<b>3</b>
Enabling attainment date calculation in external systems	3

## Bug fixes

### Attainment not being created via API

Recently we have implemented a new setting on a certificate called "Prevent Document Uploads" to safeguard sensitive documentation in MyPass.

However, an unintended bug was introduced, causing the inability to create an attainment for a certificate with this setting.

It is important to note that an attainment without a supporting document cannot be verified by the MyPass team.

Therefore, an attainment for a certificate with the "Prevent Document Uploads" setting must now have a status of either approved or rejected, as per external verification.

*A thank you to Fabian Basabe at BHP for raising this issue (INC2030752).*

## API update

### Enabling attainment date calculation in external systems

Not all certificate attainments within MyPass require a date of attainment. However, for certain external systems that integrate with MyPass it is mandatory to have an attainment date.

To assist in the calculation of the date attained, MyPass have introduced to 2 fields in the response of the following API endpoint:

#### **`/workers/sync`**

The fields provide the number of days a certificate is valid and when subtracted from the expiry date, will provide the attainment date:

`customValidityPeriodDays`  
`globalValidityPeriodDays`
