Bug Fixes

Certificate search failing to return expected results

When using the Industry Portal to find a particular certificate, you can now expect that searching for a keyword or phrase present in the certificate's name will yield relevant search results.

This is standard functionality, which was not working as expected

The screenshot shows a search interface with a search bar containing the text "Certificates containing 'heights' x". Below the search bar, there is a dropdown menu set to "All" and a label "Search Library / Course". A horizontal line separates the search area from the results. Below the line, there are several action buttons: "Remove From", "Add To", "Merge Into", and "Export". To the right of these buttons, it says "Showing 4 of 4". The results are displayed as a list of four items, each with a checkbox, a document icon, a title, and a lock icon. The items are:

- AU_CPCCCM2010B Work Safely at Heights**
Libraries: Australian Master
- AU_RFH Rescue from Heights**
Libraries: Australian Master
- AU_UETDRRF05B Perform rescue from switchyard structures at heights**
Libraries: Australian Master
- RIIWH204D Work Safely at Heights**
Libraries: Australian Master | Country: Australia
Courses: ERGT Australia [RIIWH204D]

Thanks to Mike Gartner at Kent Energy Solutions Pty Ltd for raising this issue.
