Bug fixes

Log in issue - emails containing a subdomain

In the latest release, we've addressed an issue that previously hindered Personnel from successfully completing their registration on MyPass when the invitation email included a subdomain in the email address, such as test@a.mypassglobal.com.

This issue has been resolved to ensure Personnel can now onboard successfully by continuing with their registration.

The screenshot shows the MyPass registration interface. At the top left is the MyPass logo, and at the top right is a language selector set to "English". The main heading is "Sign up with your email". Below this, there are two input fields. The first field contains the email address "test@a.mypassglobal.com" and has a red error message "Invalid email address" above it. The second field is labeled "Create password" and has a red error message "Password is required" above it. Below the input fields is an orange "Sign up" button. Underneath, there is a section titled "or Social Media" with two buttons: "Continue with Facebook" and "Sign in with Google". At the bottom, there is a link for "Existing User? Login".

Thanks to Emily Howson from DSS Sustainable Solutions Australia for raising this issue.
