Release Notes

RELEASE: 3.227

DATE: 4 February 2025

Table of Contents

Enhancements
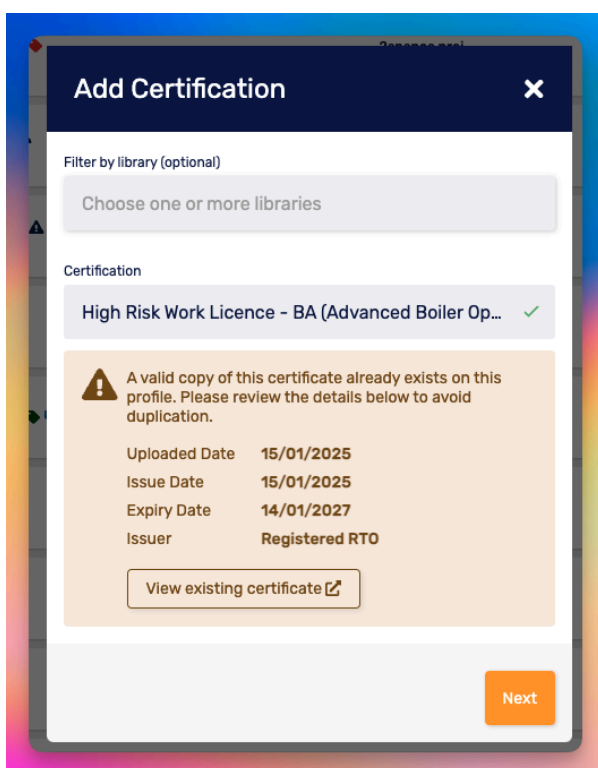

Duplicate Certificate Notification

Industry portal users will now receive a prompt if they attempt to upload a certificate that already exists on a worker's profile, making it easier to avoid duplicating certificates and rejection by our Verification team.

Users can also conveniently view relevant details such as the upload date, issue date, and expiry date of the existing certificate before deciding whether to upload a new version.

Custom Validity Support in 'Update A ProjectRole' API

The 'Update A ProjectRole' API now supports updating custom validity periods with the addition of the validityPeriod and validityPeriodUnit parameters.

This enhancement allows users to specify custom validity settings when updating project roles via API.
