MyPass Global

Release Notes

RELEASE: 3.231

DATE: 29 April 2025

Table of Contents

Enhancements **3**

Exports now Show Compliance at Requirement Group level 3

Excel Exports have Yellow Colour-Coding where Desired Requirements are Non-Compliant 3

Excel Exports have Red Colour-Coding for 'Rejected' Status 3

‘QuickVerified by’ Display in Certificate Sidebar 4

Required Personnel Information 5

Bug Fixes **7**

Improved Performance of Excel Exports 7

Resolved Projects Export Issue for Blank Role Requirements 7

Partial Dates displayed on Spanish version of MyPass (Project Role Details) 7

Enhancements

Exports now Show Compliance at Requirement Group level

CSV and XLSX exports from the Overview dashboard now show the overall compliance status for Requirement Groups, instead of showing the status of each certificate within a group. The status will either be ‘Compliant’ or ‘Missing’. This resolves confusion from previous exports that showed optional certificates as 'Missing' despite the Requirement Group being compliant. This is relevant to exports from:

- Overview > Resource Pools > Compliance, and
- Overview > Projects

Excel Exports have Yellow Colour-Coding where Desired Requirements are Non-Compliant

Excel exports from the Overview dashboard now feature yellow colour-coding for Desired requirements that are non-compliant. Previously these were colour-coded red, which created confusion when trying to assess compliance.

Additionally, the cell values for these requirements have been updated to include '(Desired)' for clarity. Desired requirements that are compliant are still colour-coded green.

Thank you to Niki and the on-site teams at Enermech for providing this feedback.

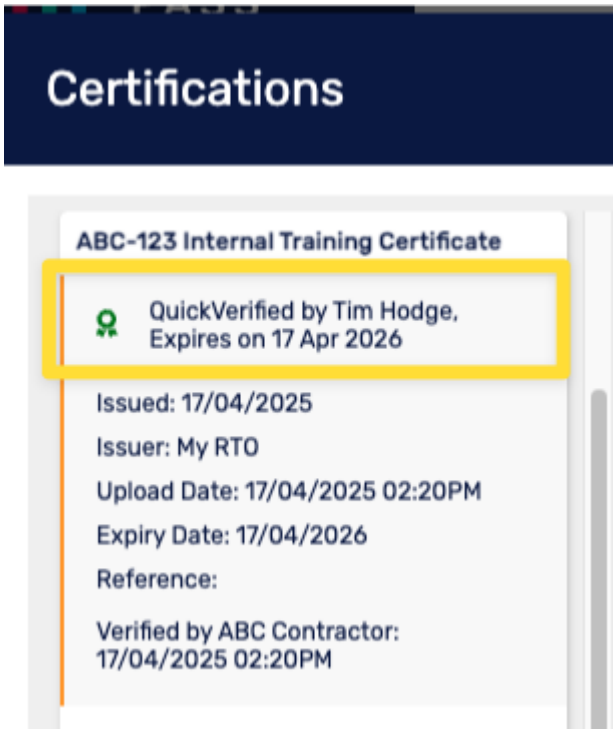
Excel Exports have Red Colour-Coding for 'Rejected' Status

Excel exports from the Overview dashboard now feature red colour-coding where the status of a mandatory requirement is ‘Rejected’. This colour-coding was previously not included.

‘QuickVerified by’ Display in Certificate Sidebar

When viewing an attainment that has been QuickVerified, the sidebar will clearly state that it has been “QuickVerified by [user’s name]” (instead of simply ‘Verified’). This is to provide clarity, and an improved audit trail, to industry portal users.

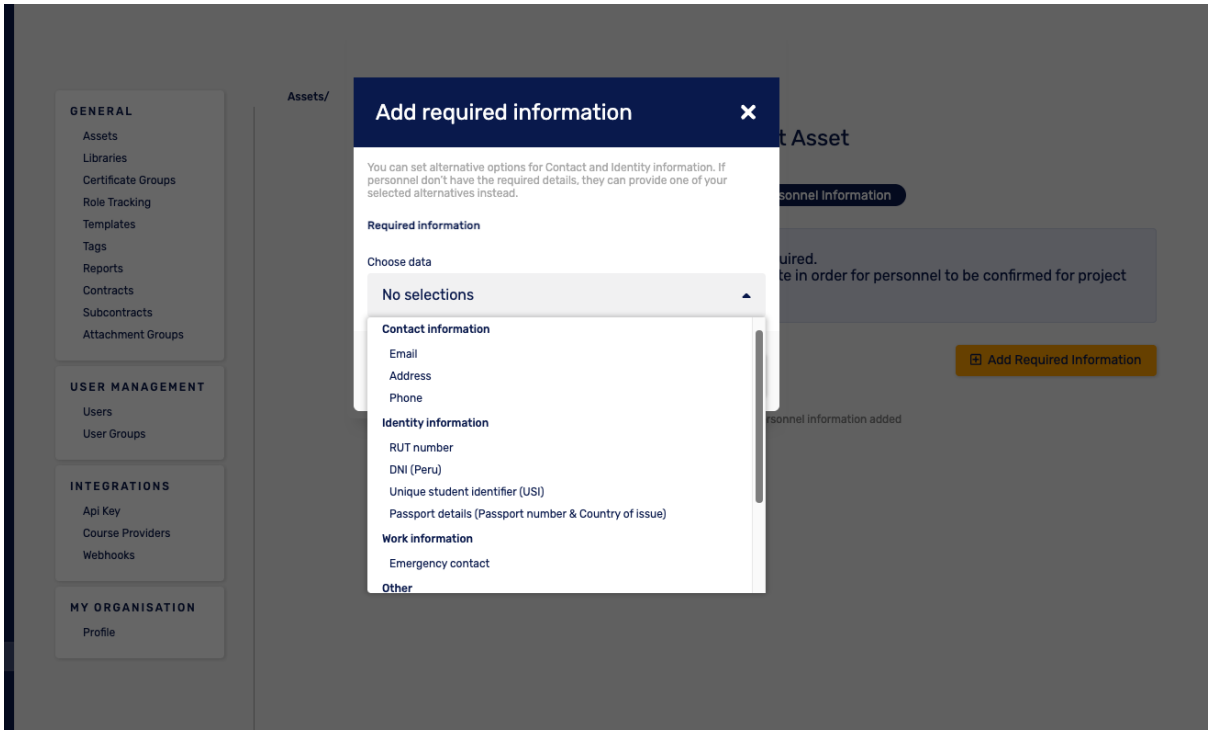
Read more about QuickVerify Certificates, including how to get started with the feature today.



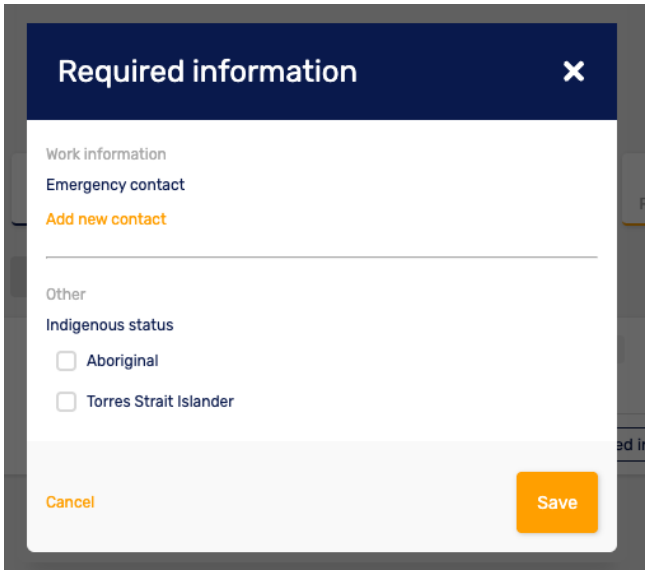
Required Personnel Information

As MyPass continues to expand its integration across enterprise-level ecosystems, organisations require greater control over the personnel information collected within the platform. Currently, MyPass does not enforce mandatory fields across all personnel, as the platform prioritizes user autonomy over their data. However, businesses need a way to ensure certain personnel information is collected for compliance, reporting, and integration with downstream systems.

To address this, MyPass will introduce a configurable setting that allows BP Admins to designate specific personnel information (e.g. RUT number, passport details) as mandatory for their asset.



Once configured, personnel missing this required information will not be able to be confirmed for roles linked to that asset. This update will ensure compliance while maintaining MyPass' flexible data management approach.



Should you require further information or assistance to implement this feature today, please contact MyPass, and we will be happy to help your organisation with the setup process.

Bug Fixes

Improved Performance of Excel Exports

Export email notifications from the Overview are now delivered more promptly, resolving previous delays or errors in receiving download links, when trying to export complex data sets.

Resolved Projects Export Issue for Blank Role Requirements

The issue causing blank values for role requirements in the exports from the Overview > Projects section has been resolved. All columns now display the correct data.

Partial Dates displayed on Spanish version of MyPass (Project Role Details)

This issue caused the spanish version of MyPass to display partial date values on the project role screen. On the project role details page, this issue has been resolved and are now displaying the correct dates.
