Enhancements

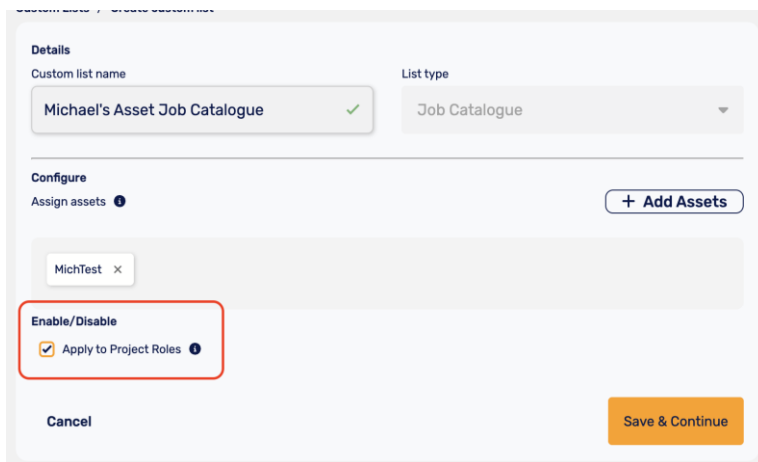

General Performance & Stability Improvements

We have made a number of changes in the background to improve system performance, including for exported reports.

Job Catalogue

We are introducing the **Job Catalogue**, a new custom list type that allows Asset Owners to build and store a standardized list of occupation names for use within their portal. This catalogue can then be applied via configuration to all projects within specific assets.

When this feature is enabled, role names for projects within the selected assets will be restricted to the predefined list in the Job Catalogue. The system will block any input that does not match a record in the catalogue.

Project Role

Classification *

Banker

Role Name *

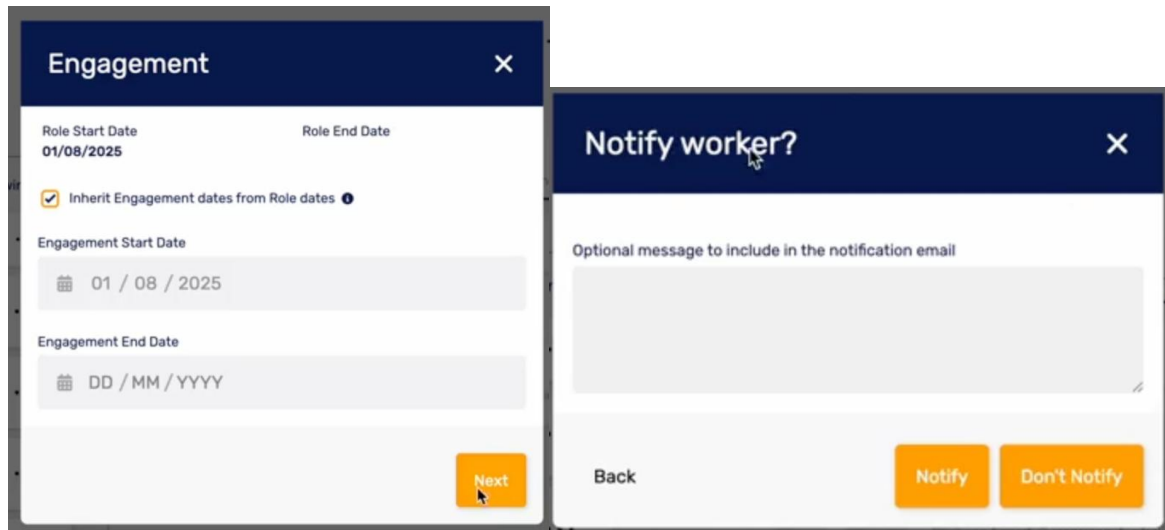

d

- DIR2423 - Director of Projects
- DIR377 - Director of Sales

Fixes

'Notify Worker' popup appearing when no changes are made to the engagement

We have fixed the issue where the 'Notify Worker' modal is incorrectly appearing upon attempted save on engagement when no modifications were made.

Personnel's custom engagement start dates not updating automatically

It was observed that when a role's start date is moved to a future date, workers with custom engagement start dates falling before the new role date failed to update. Furthermore, these workers were incorrectly excluded from the 'Notify Worker' modal, preventing administrators from communicating the necessary changes. This fix has now been completed.

Mandatory Role Position warning not triggered for inactive roles

It was observed that when we change an inactive role back to active, the 'mandatory role position' feature was not triggering, causing roles without positions to save. This fix now includes a check for these inactive roles, and the warning message will appear when the conditions are met.
