Enhancements

General Performance and Stability Improvements

We've made some general technical updates in the background to improve performance and stability.

Secure Email Export Links

We have replaced the previous direct download links with a more secure download process inside the application. Exported files now can only be accessed by authenticated users through a secure, one-time download link.

This enhancement improves data protection by preventing link forwarding, ensuring proper user authentication, enabling download tracking, and automatically expiring files after 30 minutes.

Fixes

Date Validation for Certificate Verification

Previously, for any pending verification certificate, the Expiry Date could be earlier than the Issue Date. We added date validation to ensure certificates cannot be approved if the Expiry Date precedes the Issue Date, maintaining logical date consistency.
