Release: 3.248

Date: 12 May 2026

Table of Contents

Enhancements	3
General Technical Improvements	3
Fixes	4
Rollback: ≤90 Day Expiry Filter on Overview	4
Bulk Certificate Export from Projects	4
Australian Mobile Number Validation	4

Enhancements

General Technical Improvements

We're working hard in the background on a series of new product features. In the meantime, we've made some general technical improvements to tidy up our code and improve stability.

Fixes

Rollback: ≤90 Day Expiry Filter on Overview

The 90-day expiry filter on the Overview dashboard has been removed. We identified an issue introduced in the recent release of the 90-day expiry filter on the overview dashboard. The filter had an unintended impact on the status of certificates that are expiring between 31 and 90 days. Previously these were labelled as Compliant, the change updated them to Expiring. This change surfaced in the user interface, exported reports, and public APIs. This change has now been rolled back and functionality has been restored to how it was prior to the introduction of the filter.

Bulk Certificate Export from Projects

Resolved an issue where bulk certificate exports from a Project were returning incomplete results. In some configurations — particularly roles with a large number of confirmed personnel or requirements accepting any of several certificates — certain roles were missing from the export entirely, while others showed inconsistent results between attempts.

Certificate exports from Projects should now be working as expected.

Australian Mobile Number Validation

Resolved an issue where Australian mobile numbers beginning with the prefix **0494** were incorrectly flagged as invalid when updating a worker's contact details.
